# INTRODUCTION

The tabulations in this Appendix were produced from data furnished by the ten States participating in the study. Applied Management Sciences was provided copies of the computerized files on Medicaid eligibility and Medicaid-paid claims for 1973 and 1974. The tabulations were intended to contain data from at least 95 percent of the claims for Medicaid services received in 1973 and 1974, and from 100 percent of the records on Medicaid eligibility from both years. However, a time lag exists between the date on which a service is received and the date on which a claim is filed and paid. It was estimated that 95 percent of the claims for services received during a year would be paid by the end of March of the following year. Therefore, it was necessary to examine a portion of 1975's paid claims to identify those paid for services received in 1974. Such an enlarged set of claim data for 1974 was received from nine of the ten study States.

The tabulations were performed for long-term care services, defined as services in SNFs, ICFs, long-term hospitals, and home health services. Utilization, expenditure, and recipient data were tabulated for comparison with data on the Medicaid-eligible population. The following Figure Descriptions present the contents of each Figure and the criteria for the inclusion of data in each.

## FIGURE DESCRIPTIONS

### FIGURE 1

Figure 1 presents the distribution by categorical program and demographic characteristic of Medicaid-eligible persons. Although the eligibility program of each person had to be identified for his inclusion in the Figure, the totals for each program contain individuals whose demographic characteristics were unknown. The "Unduplicated Total" column contains the total number of unique individuals counted in the separate programs (e.g., a person could be present in both the "OAA" and "AB" columns, but would be counted only once in the "Unduplicated Total" column).

### FIGURE 2

Figure 2 presents the information in Figure 1, expressed as a percentage distribution. The percent distribution is calculated separately for each program and for the Unduplicated Total column. Since the column elements may sum to less than each program total, the sum of the percentages in each column may be less than 100.0.

### FIGURE 3

Figure 3 presents the distribution by demographic characteristic of the State's total population and of the State's Medicaid-eligible population. The Figure also presents the distributions by demographic characteristic of institutionalized and non-institutionalized recipients of Medicaid-provided services. Recipients of Medicaid-covered services in an SNF, ICF, or long-term hospital during the relevant year are defined as institutionalized recipients. All other recipients of Medicaid services are defined as non-institutionalized. (Since claims for short-term and ambulatory services were not available for some States, the column for the distribution of non-institutionalized recipients contains "N/A" for those States). The distributions only contain entries for recipients with known demographic characteristics, only for recipients whose eligibility programs were identified,

and only for recipients who received services from in-state providers. However, recipients with unknown demographic characteristics are included in the column totals. Therefore, each column total (absolute and percentage) may equal or exceed the sum of the elements in the column.

FIGURE 4

Figure 4 presents a tabulation of total in-state utilization of long-term care services by type of provider and by type of ownership. Inclusion of a claim in this Figure required a match between the individual identification number on the claim record and the identification number on an eligibility record, on which the eligibility program was identified. However, it was not required that the date of service on the claim record fall within the eligibility period indicated on the eligibility record.

FIGURE 5

Entries on Figure 5 are separated into six (6) service types for all in-state providers. Recipients, utilization, expenditures, and mean length of stay (for institutional services only) were tabulated for each eligibility program. The inclusion of a claim required the identification of the recipient's eligibility program, a match of eligibility and claim identification numbers, and a concurrence of service and eligibility dates.

FIGURE 6

Figure 6 presents the utilization of in-state long-term care services by provider type and ownership, and by eligibility program of the recipient. Utilization of long-term care services outside the State is presented in a separate row. Inclusion of a claim in this tabulation required a match between the recipient's identification numbers on the claim and eligibility records, a match between the date of service and the recipient's eligibility period, and the identification of the recipient's

eligibility program. In addition to the above requirements for the inclusion of claims in this Figure, claims from an in-state provider were tabulated only if the type of ownership of the provider was identified.

FIGURE 7

This Figure is analogous to Figure 6 except that it presents data on expenditures rather than utilization. The criteria for including claims in this Figure are the same as those used for Figure 6; specifically, recipients' eligibility periods must match service dates, eligibility programs must be known, eligibility and claim identification numbers must correspond, and in-state providers' ownership types must be identifiable.

A lack of correspondence between entries in Figures 6 and 7 (expenditures without utilization) is due to three factors. First, utilization figures for some long-term care vendors were unusable or not present on the records even though expenditures were available. Second, some States' files contained payment adjustments for long-term care services which were not distinguishable from claims for services from those vendors. Therefore, when an institutional claim averaged $5 per day or less, it was considered an adjustment. In tabulating such adjustment claims, the units of service were ignored, but the expenditure amount was included. Third, some files included records for the payment of coinsurance and deductible amounts by Medicaid without any special notation to distinguish them from service claims, so that expenditure amounts were indicated without units of service.

FIGURE 8

Figure 8 presents the utilization of in-state, long-term care services by provider type and ownership, and by demographic characteristic of the recipient. Utilization of long-term care services outside the State is presented in a separate row. Claims

are included in this Figure if there is a match between the individual identification number on the claim record and an identification number on an eligibility record, if there is a match between the date of service and the recipient's eligibility period, and if the recipient's eligibility program and demographic characteristics are identified. In addition to the above requirements for the inclusion of claims in this Figure, claims from in-state providers were tabulated only if the providers' ownership types were identified.

FIGURE 9

Figure 9 presents the expenditure data that correspond to the utilization data in Figure 8. Exactly analogous criteria were utilized for the inclusion of claims in Figures 8 and 9. Specifically, the requirements for inclusion of claims were that recipients' eligibility and claim numbers were matched, that recipient's eligibility periods and service dates were matched, and that recipient's eligibility programs and demographic characteristics were identified. An additional criterion for the tabulation of claims from in-state providers was that their ownership types were identified. The comments in the description of Figure 7 which explain the non-correspondence of utilization and expenditure data in Figures 6 and 7 also apply to utilization and expenditure data in Figures 8 and 9.

FIGURE 10

Figure 10 presents data on recipients, utilization, and expenditures for long-term care services received in 1973 by type of service and by eligibility program of the recipients. A final column indicates the number of persons eligible for Medicaid in 1974, but receiving no Medicaid services in 1973. Data in Figure 10 are tabulated for services received from in-state providers in 1973 by recipients who were eligible in both 1973 and 1974. Criteria for the tabulation of claims in Figures 5 and 10 are otherwise identical. Specifically, the recipients' service and eligibility numbers and dates must match, and the recipients' eligibility programs must be identified.

FIGURE 11

Figure 11 presents the eligibility program and need category of persons who were eligible for Medicaid during the months of December 1973 and/or December 1974. The representation of an eligible person in this Figure required that he was eligible for Medicaid during December 1973 and/or December 1974 and that his eligibility program and need category were identified.

FIGURE 12

The upper and lower portions of Figure 12 present utilization and expenditure data for in-state long-term care services received in 1974. The data are presented by date of service, aggregated into calendar quarters. Inclusion of claims in this Figure requires a match between the individual identification number on the claim record and an identification number on an eligibility record, a match between the date of service and an eligibility period, and the identification of the recipient's eligibility program.

# MEDICAID ELIGIBILITY, UTILIZATION AND EXPENDITURES IN MISSISSIPPI*

*Before utilizing the data in these tabulations, consult the Technical Notes beginning on p. A.376.
